Application Assessment

Overview

The Application Assessment provides the Blue Prism team with an opportunity to assess the client's host systems.

The knowledge gained will be assist in determining the delivery and support costs which will be factored into the Return on Investment calculations in the Blue Prism proposal.

The Application Assessment requires that Blue Prism is installed onto a desktop that has access to the in scope host systems

Application Assessment Pre-requisites

Desktop PC

- Permission to use a Windows user account with access rights to network folders as required
    - Either - PC 'admin' rights or access to someone with those rights
    - Or – Desktop team actioned to pre-install Blue Prism product
- In scope host systems installed or accessible from the PC
    - User names and passwords for each application (or access to someone with the relevant system logon credentials)
    - User accounts to be set up with the required roles/permissions
- Blue Prism installed on the PC
    - Available in Blue Prism download area
- Microsoft .Net4 Framework installed on the PC
    - Available in Blue Prism download area if required
- Java Access Bridge installed on the PC (if Java applications in-scope)
    - Available in Blue Prism download area
- Microsoft SQL Express installed on the PC (or access to SQL Server database)
    - A user account with 'system admin' rights
    - Minimum 2GB capacity required

Client case data

- Optimum requirement is to have a dummy/test case in the production or test systems to enable navigation, read and write actions to be performed
- Minimum requirement is access to case data in the test or production system. Blue Prism will navigate and read data only

Blue Prism Release

As an initial starting point Blue Prism can provide an Application Assessment Release, which contains standard bespoke actions that can be utilised across different technologies. This will help you build a Launch, Login and Attach actions, whilst helping and steering you through the application assessment.

The benefit to using these are that it will help you to further understand the applications and any nuisances.
